### **Differential Evolution Homepage - ICSI**

Evolution is change in the heritable characteristics of biological populations over successive generations. These characteristics are the expressions of genes that are passed on from parent to offspring during reproduction. Different characteristics tend to exist within any given population as a result of mutation, genetic recombination and other sources of genetic variation.

### **Evolution - Wikipedia**

Along path leads from the origins of primitive "life," which existed at least 3.5 billion years ago, to the profusion and diversity of life that exists today. This path is best understood as a product of evolution. Contrary to popular opinion, neither the term nor the idea of biological evolution ...

### **Evidence Supporting Biological Evolution | Science and ...**

Adaptation is an observable fact of life accepted by philosophers and natural historians from ancient times, independently of their views on evolution, but their explanations differed. Empedocles did not believe that adaptation required a final cause (~ purpose), but thought that it "came about naturally, since such things survived." Aristotle did believe in final causes, but assumed that ...

Crash Course Big History takes a look at Humans, one of the weirdest examples of change in the Universe. Around for only 250,000 years, we are truly one of the most complex things in the cosmos.

### **Big History Project: Chapter 4 - Humans**

Evolution is a scientific theory used by biologists. It explains how living things change over a long time, and how they have come to be the way they are.. Earth is very old. By studying the layers of rock, we can find out about its past. That kind of research is called historical geology.. We know that living things have changed over time, because we can see their remains in the rocks.
