A crossword is a word puzzle that usually takes the form of a square or a rectangular grid of white- and black-shaded squares. The game's goal is to fill the white squares with letters, forming words or phrases, by solving clues, which lead to the answers. In languages that are written left-to-right, the answer words and phrases are placed in the grid from left to right and from top to bottom.

Knights and Knaves is a type of logic puzzle where some characters can only answer questions truthfully, and others only falsely. The name was coined by Raymond Smullyan in his 1978 work What Is the Name of This Book?. The puzzles are set on a fictional island where all inhabitants are either knights, who always tell the truth, or knaves, who always lie.

The dot (.) operator is used to access a member of a struct, while the arrow operator (->) in C is used to access a member of a struct which is referenced by the pointer in question. The pointer itself does not have any members which could be accessed with the dot operator (it's actually only a number describing a location in virtual memory so it doesn't have any members).

**pointers - Why does the arrow (->) operator in C exist ...**

Introduction Crossnumber Puzzles Crossnumber puzzles are similar to their more familiar cousins, crossword puzzles, in that they consist of interlocked grids of across and down answers, each of which is the answer to a specific clue.
